PROJECTS

DIGIFARM | Python

• Developed a remote farm monitoring and control application integrating sensors, actuators, and GPS tracking via Azure IoT Hub.

• Enabled farm technicians to monitor environmental conditions and fleet owners to track security and location in real time.

• Designed a mobile app with real-time data visualization, security alerts, and historical analysis for efficient farm management.

BUDGET APPLICATION | C#, SQL

• Developed a financial management tool to help users track and organize expenses efficiently.

• Implemented features for users to create, modify, sort, delete, and categorize expenses for better financial tracking.

BYTEBOARD | JavaScript, HTML

• Developed a transactional web application serving as a user-friendly discussion board and freelance platform for computer scientists
